Step 1 — Remove serial port connection

- Loosen the screws on the serial port by turning them counter clockwise by hand.
- After loosening the screws, pull the serial port out.

Step 2 — Remove Lid

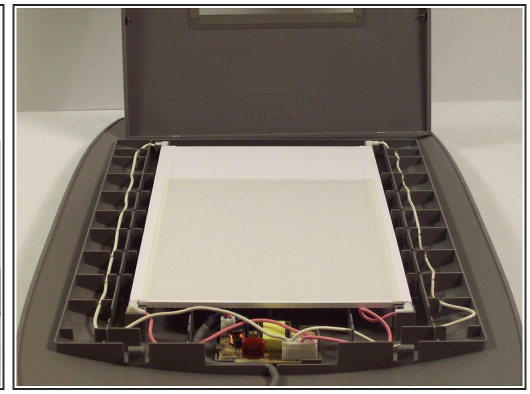

- Lift lid to its vertical position.
- Pull lid straight up to remove it from the scanner.

Step 3 — Remove the protective plastic covering

- Notice that there are two plastic tabs that need to be pushed in to remove the plastic covering.
- Use tweezers to push these tabs in.
- Gently pull the plastic covering off of the upper lid.

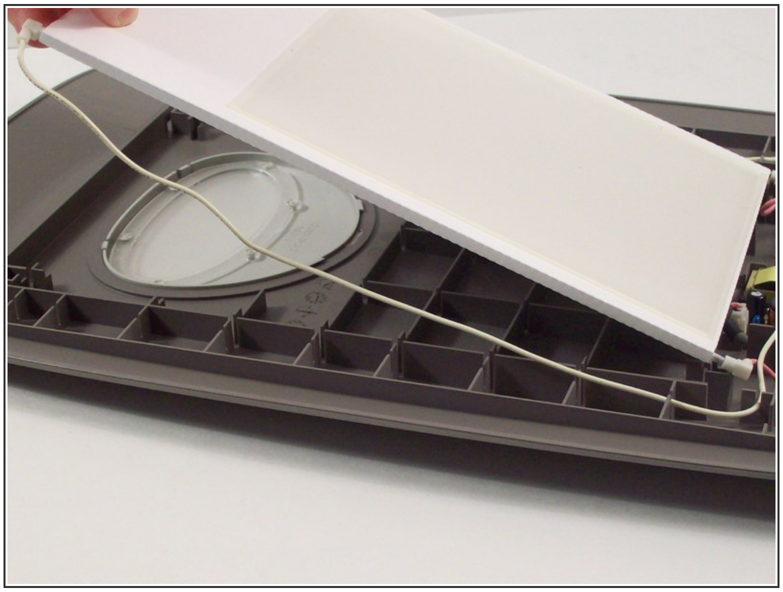

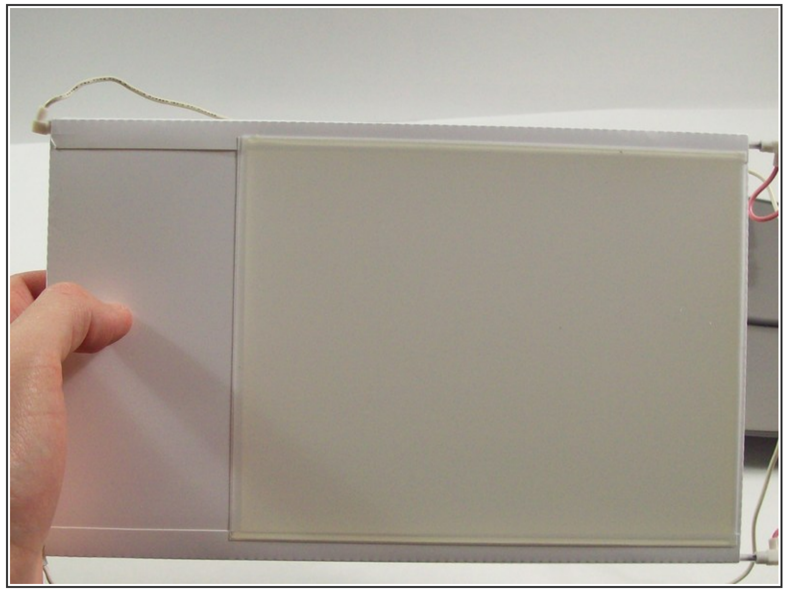

Step 4 — Remove wires from circuit board

- Grab the plastic wire housing near the serial port.
- Gently pull and jiggle the wire housing until it comes free from the circuit board.

Step 5 — Remove the bulbs

- Gently lift up the bulbs and remove the wires from the plastic.
- After completely freeing the bulbs, buy new ones and replace.

To reassemble your device, follow these instructions in reverse order.
